

FitCV

UI DESIGN

Two design options for the main screen and UC-02 workflow

AI-powered CV screening and job readiness platform

PROJECT ASSIGNMENT 3

COURSE

Introduction to Software Engineering

PROJECT

FitCV

PRIMARY ACTOR

Student / Job Seeker

MAIN USE CASE

UC-02 - Analyze CV against Job Description

VERSION

1.0

DATE

25 July 2026

DOCUMENT CONTROL

Scope and submission compliance

This document consolidates all UI design outputs required by PA3. It uses the current FitCV implementation as Option A and provides a structurally different Option B for each selected screen.

Revision history

Date	Version	Description	Author
25/07/2026	1.0	Initial PA3 UI Design submission with six high-fidelity design outputs.	FitCV Project Team

PA3 UI requirement checklist

PA3 requirement	Status	Evidence in this document
Main screen and 1-2 screens for the main use case	Complete	Student Dashboard, Analyzer Input, Analyzer Result
Two UI designs or options for each screen	Complete	Option A and Option B for all three screens
Purpose, content and usage description	Complete	Compact specification on every Option A screen page
All design outputs in one document named UI Design	Complete	This document
UI matches modeled use cases	Complete	UC-02 traceability and alternative-flow states
Sufficient labels and controls	Complete	Upload/select CV, add JD, validate, analyze, review evidence and suggestions

DESIGN BASIS

Use-case alignment and visual language

Selected main use case

UC-02 - Analyze CV against Job Description. The Student selects or uploads a CV, provides a complete JD, runs evidence-based matching, and reviews the saved result.

MAIN USER FLOW 1. Open Dashboard and start New Analysis. 2. Select or upload a PDF/DOCX CV. 3. Paste, upload or select a job description. 4. Review readiness and validation feedback. 5. Run analysis and wait for grounded processing. 6. Review score, label, category evidence and gaps. 7. Continue to prioritized improvement suggestions.	DESIGN SYSTEM <table><tr><td>Student accent #2563EB</td><td>Application canvas #F8FAFC</td></tr><tr><td>Primary text #0F172A</td><td>Success #16A34A</td></tr><tr><td>Warning #D97706</td><td>Border #E2E8F0</td></tr></table> Typography: Aptos / Inter style. 8 px spacing rhythm. Lucide line icons. Scores always include a number and text label, never color alone.	Student accent #2563EB	Application canvas #F8FAFC	Primary text #0F172A	Success #16A34A	Warning #D97706	Border #E2E8F0
Student accent #2563EB	Application canvas #F8FAFC						
Primary text #0F172A	Success #16A34A						
Warning #D97706	Border #E2E8F0						

SCREEN 1 - OPTION A

Student Dashboard

Option A is the implemented React/Vite interface captured from the current FitCV source.

PURPOSE	WHAT IT SHOWS	HOW USERS USE IT
Give the Student a concise readiness overview and a clear entry point to UC-02.	Average score, analyzed CVs, tracked applications, recent activity and quick actions.	Select New Analysis, Continue Last Analysis or Match Analyzer to start or resume UC-02.

Figure 1A. Option A - Implemented analytics-first bento dashboard.

FITCV UI DESIGN | 4

SCREEN 1 - OPTION B

Student Dashboard - Alternative

DESIGN DIRECTION	KEY IMPROVEMENT	RECOMMENDATION
Task-first command center with a prominent target-job question.	Reduces scanning before the primary action and previews selected CV/JD sources directly on the dashboard.	Preferred because it exposes the UC-02 starting action more clearly.

Figure 1B. Option B - Alternative task-first dashboard.

SCREEN 2 - OPTION A

CV and JD Match Analyzer - Input

Option A is the implemented React/Vite interface captured from the current FitCV source.

PURPOSE	WHAT IT SHOWS	HOW USERS USE IT
Collect both source documents required by UC-02 and prevent incomplete analysis.	CV drop zone, PDF/DOCX and 10 MB rules, JD text area, upload action and Analyze Match button.	Upload/select a CV, provide the JD, correct validation feedback, then select Analyze Match.

Figure 2A. Option A - Implemented simultaneous two-column analyzer input.

SCREEN 2 - OPTION B

CV and JD Match Analyzer - Input - Alternative

DESIGN DIRECTION	KEY IMPROVEMENT	RECOMMENDATION
Guided three-step source preparation workflow.	Makes CV parse readiness, JD completeness, privacy handling and final review explicit.	Preferred for novice users and closer mapping to UC-02 steps and alternative flows.

Figure 2B. Option B - Alternative guided stepper with readiness summary.

SCREEN 3 - OPTION A

CV and JD Match Analyzer - Result

Option A is the implemented React/Vite interface captured from the current FitCV source.

PURPOSE	WHAT IT SHOWS	HOW USERS USE IT
Display the completed UC-02 result in a clear score-first summary.	Overall score and label, category breakdown, alignment, matched/missing skills and next steps.	Review the score and evidence, then select View Improvement Suggestions to continue to UC-03.

Figure 3A. Option A - Implemented score-first result summary.

SCREEN 3 - OPTION B

CV and JD Match Analyzer - Result - Alternative

DESIGN DIRECTION

Source-grounded evidence comparison workspace.

KEY IMPROVEMENT

Places CV quotes beside JD requirements and separates matched, partial and missing evidence.

RECOMMENDATION

Preferred for explainability and the rule that a score must not automate hiring decisions.

TRACEABILITY

UC-02 to UI control mapping

The mapping below demonstrates that both design directions contain sufficient labels, controls and feedback for the documented basic and alternative flows.

UC-02 step	Required behavior	UI control or feedback	Screen
1	Open the Match Analyzer page.	New Analysis CTA and Match Analyzer navigation.	Dashboard
2	Select or upload a CV.	Drop zone, CV selector, file name, size and parse status.	Analyzer Input
3	Enter, upload or select a JD.	Paste Text, Upload File and Choose Saved JD.	Analyzer Input
4	Validate both sources.	Format/size guidance, Required label and readiness summary.	Analyzer Input
5	Retrieve parsed CV content.	Parsed or Processing status; analysis disabled when unavailable.	Analyzer Input
6	Extract JD requirements.	Completeness feedback and detected requirement summary.	Analyzer Input
7	Run AI-assisted matching.	Analyze button, processing status and retry-safe error state.	Analyzer Input
8	Save and display result.	Score, label, breakdown, evidence, gaps and suggestions action.	Analyzer Result

Alternative-flow UI states

JD empty or too short Inline error names the requirement and returns focus to JD input.	CV parsing in progress Processing is visible and Analyze remains disabled.	AI timeout or quota error Retry is offered and no fabricated result is shown.	Invalid AI output The analysis is marked Failed with no score presented.
---	--	---	--

DESIGN DECISION

Comparison and recommended direction

Screen	Option A strength	Option B strength	Recommended
Student Dashboard	Readiness overview and implementation continuity.	Makes the UC-02 action immediately visible.	Option B
Analyzer Input	Fast side-by-side entry for experienced users.	Guided preparation and explicit validation.	Option B
Analyzer Result	Compact score-first review.	Best evidence traceability and decision-support framing.	Option B

Final recommendation

Keep Option A as the implementation baseline. Use Option B as the preferred next design iteration because its task-first dashboard, guided source preparation and side-by-side evidence review map more explicitly to UC-02.

Quality and accessibility notes

✓ Scores include a number and Strong/Moderate/Weak label.	✓ Matched, partial and missing states use text and icons.	✓ Upload controls state PDF/DOCX and 10 MB constraints.
✓ AI output is decision support, not automatic hiring action.	✓ Buttons use direct action labels and safe Retry behavior.	✓ Each screen preserves one clear primary action.
